

Diabetic Foot and Lower Limb Care in the 21st Century:
What every patient has the right to expect.

Weston Education Centre,
King's College Hospital.
Saturday 21st May, 2011.

King's Health Partners and Diabetes UK have organised a patient information day to discuss the understanding and treatment of potential complications with the foot and lower limb.

There will be participation from a wide range of healthcare professionals involved in the treatment of lower limb complications associated with diabetes. Modern, up-to-date treatments will be looked at through presentations, open discussions, and workshops. We aim to improve patients' knowledge and understanding of these potential complications to make sure that they have the confidence to cope with any issues that may arise.

This is the first meeting of its kind and it is free to attend.
